

HW 3 Analysis of Youtube Comments

Word Clouds for Videos

Video 1: In Hell We Live, Lament – Mili (feat. KIHOW)
(<https://www.youtube.com/watch?v=XfTWgMgknpY>)

company limbus
understand
ë'ë° e² song
think e°sē° μēsē° love
now inside a moon
i°e° is everyroid i°h
music like keep hell
live e±°e°e° fire day thanks loop project
lyrics i° e°e°e° related banger
lament year will day thanks loop project
feel myth life heard
limbussweep i° never
e°e°e°e° i°is i°e°
inferno happy still
i°e° beautiful i° i° i°e°e°

Video 2: [Library of Ruina] String Theocracy (<https://www.youtube.com/watch?v=ofmYqXfjFs8>)

see whole
ã.ã.ã. good game
even end great angela can
e°e° last ruina sheep
cool i° eyes mili
lobotomy song e° left
just get like love will
lyrics i° killing now hope
one library buttered man
time lot electric line
company e°e°e°
i° e°e°e° limbus
version

The two videos are both the opening songs of two different games created for Project Moon by the artist Mili. The games themselves are the second and third entries of the series. The series in total has three games: Lobotomy Corporation, Library of Ruina, and Limbus Company. References to this can be seen in the word clouds with the words, limbus, company, moon, project, ruina, lobotomy, library, and even the artists name mili being present in both word clouds. The fact that they are songs are also referenced as both word clouds contain the word song and lyrics. There are also references in the comments about both songs being for a game. Since the songs are both for games from the same company the overlaps in words relating the different games together makes sense. Other commonly used words are also seen in both word clouds. There are also words that cannot be displayed properly on both word clouds but are also commonly used, this is because the videos both have attention in foreign countries, namely Japan and Korea, making some comments in Japanese and Korean respectively. This also affects the word clouds as some of the more commonly used words are in these languages, however, if the words before being displayed on the word cloud are translated, the words themselves are similar to the commonly used words in English.
